(U) CHINA: POSSIBLE RENEWED USSR MAJOR PROJECT  
ASSISTANCE INCLUDING RENOVATION OF 1950s  
SOVIET-BUILT FACTORIES

Summary

As part of the expanding China-USSR economic relationship, the two sides reportedly are considering Soviet assistance in renovating as many as 17 factories--probably from among those built with Soviet assistance during the 1950s--and constructing as many as seven new projects. Among the latter would be a metallurgical project, an open-pit coal mine in northeast China, and three thermal electric generating plants. Discussions have included references to nuclear-powered electric generation. Preliminary Soviet technical assistance reportedly already has been extended on an open-pit coal mine in northeast China. If these projects get underway, they would represent the first Soviet project assistance to China since the Soviets withdrew their advisers in summer 1960 in the wake of worsening relations.

The possibility that the Soviets might help renovate some of the original projects raises questions about where the Soviet-built facilities are located and in what economic sectors. No list of the original projects is available, as far as can be determined, and Chinese and Soviet sources conflict. A list of more than 100 factories, either known or believed to be among the 156 projects constructed during the 1950s, has been compiled based on information from a variety of sources (see appended tables).

enterprises, including 50 items agreed to between 1949 and 1952. The number of projects was increased to 156 in October 1954. The Soviet-built or reconstructed plants constituted the backbone of Chinese industry.

Increases in Pledged Projects

Over the next few years the number of projects was readjusted several times. By late 1957, the parties had agreed on 211 items of cooperation. In August 1958, Moscow pledged support for another 47 items. With the new agreement for the extension of Soviet assistance in February 1959, the USSR agreed to help China construct 78 additional giant industrial facilities, raising the total number of pledged projects to 291 for the 1949-67 period.

The nature of Soviet aid was more comprehensive and systematic for the 156 plants of the 1949-59 period, and many of the additional facilities were left uncompleted when the Soviets pulled out their advisers and removed their blueprints in 1960. Consequently, the appended tables count only those plants known or thought to be among the original 156.
